Team Particle Plan

Team Particle Plan is a collaboration between four creative partners based in the Netherlands. Each of them is known for its innovative approach and individuality in coming up with progressive ideas and solutions to complex situations. Every member has its own experience in the execution, organisation and production of complex technological or environmental projects on a large scale.

Studio Drift explores the relationship between nature, technology and mankind. Their work comes to life by continuing collaborations with scientists, research facilities computer programmers and engineers; the results are truly innovative and ground-breaking site specific artistic installations around the theme 'light' – a testament to the cross-pollination between the technically advanced, the aesthetically beautiful and awareness of future potentials. While their visual language is characterized by dreamy and poetic aesthetics, the concept behind the works is often based on an unexpectedly critical engagement.

DUS Architects builds 'Public Architecture': Design that consciously influences our daily life. This social significance shows at all levels of DUS' work, ranging from large urban strategies to outdoor breakfast designs. DUS sees architecture as a craftsmanship and combines research and design with a 'hands on' approach and unique use of materials.

Rombout Frieling makes matter move man

As designer, engineer, researcher and entrepreneur, Rombout and his teams initiate multifaceted innovation processes. These uncover and address our pressing human needs by realizing novel and aesthetic solutions in which technology has a purpose.

Next to the work with his studio and various spin-out companies, Rombout is also creative director of the Intelligent Lighting Institute at Eindhoven University of Technology (TU/e), curator of the GLOW forum for light & architecture and Sir James Dyson Innovation Fellow at Royal College of Art London.
